

**Composites USA** is a world class supplier of reinforced plastic equipment for the chemical process industries. Our Quality Assurance Process has met the demanding requirements for outside audit by the U.S. Government (Mil-I-45208A) and Factory Mutual.

Our in-house mechanical test capabilities encompass many areas, including those for assuring bond strengths on thermoplastic and fiberglass composite welds, verifying laminate strengths on specified lay ups, and verifying proper resin to glass percentages. In addition to the above, a laboratory has been set up for small scale environmental exposure testing for non-standard reagents.
